The following is an examiner's statement of reasons for indicating allowance of claims 1-4: The prior art does not disclose a distance detecting device configured to detect a distance between the electrode group and the holding object; and a control device configured to control the applied voltage to the electrode group based on distance information detected by the distance detecting device, such that the holding object is held in a direction away from the electrode group while floating in a state that an entire surface of the holding object located in the electrode group side separates from the electrode group at a predetermined distance without having contact with the electrode group. This feature in combination with the rest of the claim limitations is not anticipated or rendered obvious by the prior art of record.

The following is an examiner's statement of reasons for indicating allowance of claim 6: The prior art does not disclose a distance detecting device configured to detect a distance between the electrode group and the holding object, and that the control portion applies the voltage whose polarities are opposite to each other to the electrode A and the electrode B, and alternately applies the voltage of the reversed polarity of positive and negative to the same electrode element, and controls the applied voltage to the electrode group based on distance information detected by the distance detecting device, such that the holding object is held in a direction away from the electrode group while floating in a state that an entire surface of the holding object located in the electrode group side separates from the electrode group at a predetermined distance without having contact with the electrode group. This feature in combination with the
